Kitakyushu, Japan

MEETING PLANNER'S GUIDE

Why Kitakyushu?

The City of Kitakyushu was created when five cities merged in 1963. Since the government-run Yawata Steel Works began operations in 1901, the city has developed around heavy and chemical industries, such as iron and steel, machinery, and chemical companies, and has underpinned industrial modernization and rapid economic growth in Japan. In recent years, a concentration of industries has gathered in our city that includes robotics, auto, and telecommunications industries. The City of Kitakyushu continues to develop today as a manufacturing town proud of its advanced technological strength.

In addition, city residents, corporations, academic organizations, and the government have united to overcome the severe pollution problems that arose as a result of that development. In 2011, we were the first city in Asia to be selected by the OECD as a Green Growth City that has succeeded in balancing the environment and economy.

We have confronted various issues, including serious pollution, the decline of major industries, and an aging population, but each time have adapted to become a Transformative City that has overcome hardships and turned them into opportunities.

I look forward to seeing you all in the City of Kitakyushu. I believe that those who participate in meetings held in the City of Kitakyushu will be inspired to take the next step.

Kenji Kitahashi
Mayor
City of Kitakyushu, Japan

TRANSformative City Kitakyushu

Kitakyushu was selected as one of four Model Cities for Green Growth by OECD in June 2011.

In 2011, the Organisation for Economic Co-operation and Development (OECD) selected the City of Kitakyushu as a Green Growth Model City that has a balance between the environment and economy. Three other cities (Paris, Chicago, Stockholm) were also chosen as model cities for this program. The City of Kitakyushu is the first Asian city selected for this honor.

Chicago

Paris

Stockholm

Kitakyushu

OECD published a report on green growth in Kitakyushu.

Green growth is a balance between environmental improvement and economic growth. Based on two years of detailed studies and research, OECD announced the publication of a report in the OECD Green Growth Studies series, "Green Growth in Kitakyushu, Japan" (English version published in May 2013; Japanese version published in October 2013).

In this report, OECD evaluated the remarkable actions of Kitakyushu and offered additional recommendations to further promote green growth.

Shift from Overcoming Pollution to International Environmental Cooperation

Modern industry in Japan began in the City of Kitakyushu when the government-run Yawata Steel Works, which had the country's first genuine modern blast furnace, began operating in 1901. The Kitakyushu industrial area supported Japan's rapid growth as one of four major industrial zones. However, this development caused serious industrial pollution in the 1960s.

The citizens, government, and corporations worked together to tackle this pollution problem. Dokai Bay, where even E. coli could not survive, was called the Sea of Death. However, over 100 species of fish and shellfish that once lived in the bay have returned, and the sky, which once recorded the worst dust fall in Japan, was improved to such an extent that the national government chose the City of Kitakyushu as a Star Light Town. We have restored our beautiful ocean and sky.

Kitakyushu's efforts in overcoming pollution were honored in 1990 with the UNEP Global 500 Award, and again in 1992, when it was presented with the UN Local Government Honours Award at the United Nations Conference on Environment and Development (Earth Summit), making it the only municipality in Japan to receive the award.

By conveying the city's globally recognized environmental efforts to developing nations with ever-increasing pollution problems through environmental cooperation activities focusing on Asia, Kitakyushu has begun to contribute to the improvement of the global environment. Starting with its friendship city Dalian in China, today Kitakyushu engages in cooperation activities all across Asia, including South East Asia and India. Kitakyushu's cooperative efforts are not limited to the fields of water and air pollution, but also deal with waste treatment and recycling, water supply and sewerage, and the vast array of environmental problems in Asia resulting from economic growth.

Springboard for
Japan's modern history

Higashida Blast Furnace No. 1 was ignited in 1901 as a government-run steel works. In 1972, it was shut down and there was talk of dismantling it. However, in response to the residents' appeal to preserve it as the birthplace of modern steelmaking in Japan, the City of Kitakyushu decided to carry out care and maintenance and designated it as a cultural property in 1994.

1960s

Today

TRANSformative Industries Leading Industries

Environmental Industries/Forming Next-Generation Energy Bases

Projects Related to Renewable Energy

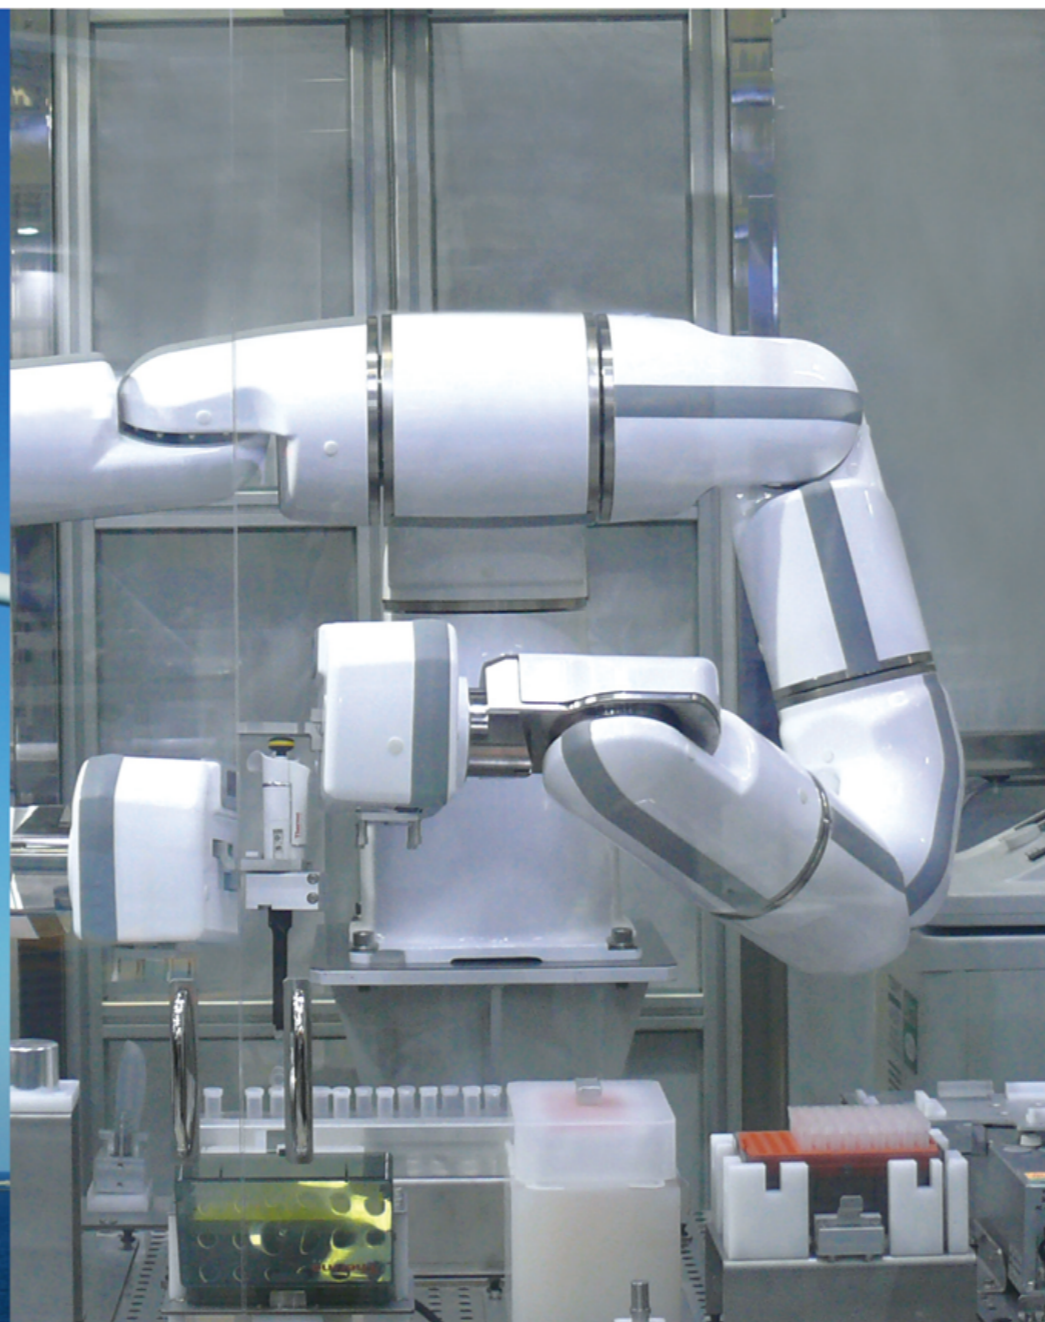

- ★Scheduled construction of offshore wind-generated power plant over approx. 2,700 ha. in the Hibikinada Sea (construction/operation scheduled to start in 2022)
- ★Adoption of 251,715 kW (3rd highest in Japan) of solar-power generation, wind-generated power of 20,852 kW (as of September 2016)

Eco-Town Project

The City of Kitakyushu is developing the Eco-Town Project as the mainstay of environmental and recycling industries promotion. Industrial locations consist of 23 companies and groups, with 9 ongoing empirical research cases, having a total of 1.45 million observers (as of February 2017).

Kitakyushu Smart Community Project

For 5 years from 2010, this project was implemented in the Higashida District. A research demonstration project carried out that strove for further low carbonization succeeded in reducing CO₂ by 51.5% as of 2014.

Robotics Industry

A global manufacturer of industrial robots, Yaskawa Electric Corporation is located in Kitakyushu, which has a growing cluster of corporations and researchers that support the robotics industry.

Industrial robots are anticipated to play an active role in a wide range of fields, from automotive production lines to distribution, and at plants producing medicines and foods. The city is also promoting improved productivity and greater competitive strength by providing support to local manufacturing businesses.

In addition, when it comes to service robots, Kitakyushu is pioneering a demonstration project for nursing care robots with its designation as a National Strategic Special Zone designated in 2017, as well as endeavoring to support research and development for the practical application of new robot technologies, such as robots for inspecting infrastructure.

Creation of a Hub for the Auto Industry and Next-Generation Vehicles

The northern Kyushu area, which also includes Kitakyushu, is home to four automobile manufacturers and forms a major base that supports Japan's automobile industry with a production capacity of 1.54 million vehicles a year. Small- and medium-sized local businesses are also expanding operations and newly entering the market as automobile-parts related companies.

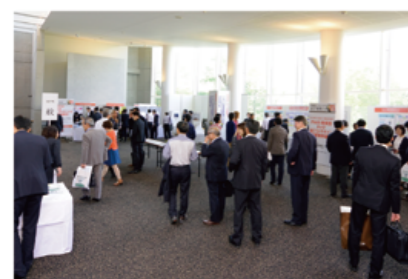

The Kitakyushu Science and Research Park is targeting the development of next-generation vehicles with fully-automated driving functions that utilize artificial intelligence. Kitakyushu is also promoting driving demonstration projects for ultra-compact mobility and the expanded use of fuel cell vehicles, as it aims to become a major base for the development, demonstration, and production of next-generation vehicles in cooperation with automobile manufacturers and the local government.

TRANSformative Research & Development

Kitakyushu Science & Research Park

Kitakyushu Science & Research Park aims to be a base for science and research in Asia to advance the development of technology in new industries. It opened in April 2001 as a one-of-a-kind experiment that brought together science and technology-related national, municipal, and private universities and research institutes on a single campus. Today, leading universities sharing the principles of the Kitakyushu Science & Research Park carry out active education and research activities in technology, particularly focusing on environmental and information technologies.

In addition, the Kitakyushu Foundation for the Advancement of Industry, Science and Technology (FAIS) is working on initiatives, such as developing highly skilled human resources, and supporting research and development aid and industry-academia collaboration.

On-site universities and research institutes. There are 2,329 university students and 314 researchers (as of May 1, 2016), and national, municipal, and private universities (1 faculty, 4 graduate schools).

- Faculty and Graduate School of Environmental Engineering, University of Kitakyushu
- Graduate School of Life Science and Systems Engineering, Kyushu Institute of Technology
- Graduate School of Information, Production and Systems, Waseda University
- Graduate School of Engineering, Fukuoka University

There are 16 research institutes and 47 research and development companies (as of January 1, 2017).

Joint Graduate School Car Electronics Course / Intelligent Car & Robotics Course

Three universities with campuses in the Kitakyushu Science and Research Park combine each of their strengths to run a collaborative graduate school consisting of a Car Electronics Course in which students study basic technology for automotive electronics, and an Intelligent Car & Robotics Course in which students study intelligence technology for automobiles and robots. Both courses train highly skilled, expert human resources as leaders responsible for the next generation that meet needs in the industrial automotive and robotic fields.

In addition, the AI Sub Course was added to the Intelligent Car & Robotics Course from FY2017 due to the pressing need to nurture human resources capable of undertaking research and development in artificial intelligence, which is a key technology transforming not only industry, but society as a whole.

The four university presidents, mayor of the City of Kitakyushu, chairman of the Kitakyushu Chamber of Commerce and Industry, and the Kitakyushu Convention & Visitors Association attended a ceremony to sign the partnership agreement.

Partnership agreement with four universities in the city on attracting and holding conventions

In August 2015, the City of Kitakyushu, the Kitakyushu Chamber of Commerce and Industry, and the Kitakyushu Convention & Visitors Association concluded a partnership agreement on attracting and holding conventions with the Kyushu Institute of Technology, Kyushu Dental University, The University of Kitakyushu, and the University of Occupational and Environmental Health, Japan, which are all located in the City of Kitakyushu.

The four universities have sponsored meetings or worked as local hosts to hold international meetings and conferences, and will further strive to attract conventions to the city in the future through stronger collaboration.

Kyushu Institute of Technology (Kyutech)

Under the school's founding principle to train skilled individuals proficient in technology, for more than a hundred years, Kyutech has educated highly skilled experts with far-reaching aspirations who possess solid manufacturing experience. With engineering schools and graduate schools, the institute is promoting cutting-edge research in areas including environmental engineering, aerospace engineering, and robotics.

As a wellspring of knowledge, Kyutech actively serves as a local host and sponsors academic meetings that make the most of specialized fields in which the school excels to contribute to the creation and development of next-generation industries through education and research in order to meet the demands of the local community. Kyutech believes doing so contributes to the development of highly skilled human resources.

TRANSformative Impacts

Case in Point

G7 Kitakyushu Energy Ministerial Meeting

Dates: May 1-2, 2016
 Venue: RIHGA Royal Hotel
 Number of Participants: 200 from G7 countries and 3 international organizations
 Organizers: Ministry of Economy, Trade and Industry

Joint Statement: Kitakyushu Initiative on Energy Security for Global Growth

Ministers and other officials from G7 countries gathered together in Kitakyushu at the G7 Kitakyushu Energy Ministerial Meeting (EMM) to discuss the important global issue of energy. Discussions highlighted the issues of promoting energy investments, strengthening energy security, and energy sustainability under the main theme of "Energy Security for Global Growth." The meeting adopted the "Kitakyushu Initiative on Energy Security for Global Growth," which incorporates the outcomes of the "Youth Energy Summit Kitakyushu," at which local students, who are the leaders of the future, studied about and discussed the issues of energy and the environment.

Kitakyushu's Legacy

During the G7 meeting, venue exhibitions and pre- and post-meeting tours were used to spotlight Kitakyushu's advanced environmental and energy measures, as well as technologies and products from local companies, universities, and research institutes. Visitors were welcomed to the city with Kitakyushu's famously warm hospitality, local foods, and traditional culture.

Voices of Participants

Mr. Miguel Arias Cañete,
 EU Commissioner for
 Climate Action and Energy

"Kitakyushu has been the perfect setting for the discussion we had over the last two days on global energy security, sustainability, and innovation because this city is living proof on how clean energy transition can transform our economy and boost energy security."

The 3rd Asia Future Conference

Dates: September 29-October 3, 2016
 Venue: Kitakyushu International Conference Center, the University of Kitakyushu
 Number of Participants: 397 from 18 countries
 Organizers: Sekiguchi Global Research Association, Atsumi International Foundation

The International Rubber Conference 2016 Kitakyushu

Dates: October 24-28, 2016
 Venue: Kitakyushu International Conference Center, West Japan General Exhibition Center Annex
 Number of Participants: 920 from 30 countries
 Organizers: The Society of Rubber Science and Technology, Japan

🚄 Bullet train

Required time

Kitakyushu International Convention Zone

Kitakyushu International Convention Zone is directly connected to the bullet train exit of JR Kokura Station, only five minutes away on foot. Featuring an international conference center, exhibition center, and hotels, it is an ideal location for large-scale conventions. It is also conveniently located only 30 minutes away by subway and bullet train from Fukuoka Airport, one of Japan's busiest hubs. Kitakyushu's reasonable costs that are decidedly lower than other major cities in Japan make this an attractive destination for meetings and events of all kinds.

Total Service... Event Consulting to Management

The Kitakyushu Convention Bureau has both a marketing and event services division, which enables us to provide comprehensive services, from marketing and promotions before your event, to on-site management on the day.

○Assistance in Selecting Sites

Request a DVD and pamphlet about Kitakyushu from our Convention Bureau to help you learn about all we have to offer. The Convention Bureau can introduce you to the most appropriate venues for your event and arrange inspection tours to potential sites.

○Kitakyushu MICE Subvention

Kitakyushu offers a subvention of up to 15 million yen, depending on the scale of the event.

○Event Support at the Kitakyushu International Conference Center and West Japan General Exhibition Center

The Convention Bureau will create a comprehensive plan depending on the type of event, and provide total support to ensure that your event exceeds all expectations.

○Pre/Post Tours and Banquets

The Convention Bureau can also plan and arrange pre/post tours and banquets tailored to your needs to make sure your participants have a memorable experience. Kitakyushu is a popular destination for industrial tourism and factory tours, drawing consistent acclaim from participants.

○Arrangement of MICE Supporter

The Convention Bureau can make arrangements for volunteers to work as registration desk staff, event assistants, and non-professional interpreters.

○Free Convention Items

The Convention Bureau can provide convention bags, maps of the convention zone and surrounding area, and special welcome cards for international visitors that offer discounts at participating businesses in four languages.

○Welcome Signs and Entertainment

The Convention Bureau can set up welcome signs in JR Kokura Station and Kitakyushu Airport and arrange for entertainment and local products at receptions.
